## Portable iButton Reader

Harsh Environments

PulseStar is designed for the harshest environments. It's ideal for security rounds, inspections, preventive maintenance checks, or any time you need to track people, items, locations, and activities.

### Working outdoors in the rain?

PulseStar's cylindrical metal case is sealed against dirt and moisture. You can take it outdoors in a rainstorm, or to a dirty, dusty shop floor, without worry—it will still perform. Indoors or outdoors, PulseStar can handle it!

### Working in a high-noise environment?

Or in an area where any noise would be a disruption? PulseStar indicates a successful read not with a tone, but with a pulse. Only the user gets immediate feedback on a good read—perfect for use on a factory floor, or in the quiet halls of a hospital.

### Need something more durable than bar codes?

Or need to be absolutely certain the person was at the job? PulseStar is a portable data collector that reads iButtons. iButtons are small, durable metal canisters that contain a unique ID number that cannot be duplicated. You can assign the button to represent a person, a location, an item, or even an action.

When PulseStar touches a button, the button's unique ID is stored in the reader's memory with date and time.

When the work is done, the reader is returned to a docking station. PulseStar communications software for the PC transfers the data from the reader to the computer.
